

SPIDER NJ

Like a spider web on the Sea Trout

Once again, simple is good! This little fly is so easy to tie that you can easily fill a box with different weighted versions. Thanks to the Pro Tubefly System, it is easy to add different Drop Weights to the FlexiTube. If you need extra weight, you can add a Pro Cone Disc but I like this fly with the Pro Sonic Disc.

The colors are mostly black and this is the most safe color for both salmon and trout in my opinion. Black flash and the rubber legs make it alive along with the little squirrel strip. The fly can be fish classic down stream but also up stream.

I prefer to make small strips of around 5 cm to tease the fish and this I believe works with this fly. To make it simply, this fly just works where many other fail!

1. Add a Pro Dropweight on a black 10/40 mm Pro Flexitube. Then rubber legs with sparkle.

2. Add a squirrel strip, a little black fish and Jungle Cock followed by a black hackle.

3. Add a rabbit strip as wing and one piece of blue flash on each side.
